

SHAHEEN EV

Electrical & Electronics Engineering Student

Kerala, India | +91-7736178009 | shaheennoushad687@gmail.com

LinkedIn: linkedin.com/in/shaheenev/ | GitHub: github.com/shaheen-space

PROFILE

4th-year Electrical & Electronics Engineering student with an interest in power electronics, embedded systems, renewable energy, automation, and software-based engineering applications. Experienced in practical projects using Arduino, ultrasonic sensors, Python, OpenCV, machine learning, and Streamlit. Seeking industry experience through electrical, electronics, embedded systems, automation, and related engineering internships.

EDUCATION

B.Tech — Electrical & Electronics Engineering

Idukki Government College, Kerala | KTU | 2023-2027 | 4th Year / 7th Semester | No Backlogs

TECHNICAL SKILLS

Electrical & Electronics: Power Electronics · Electrical Machines · Power Systems · Control Systems · Renewable Energy

Programming & Software: Python · C/C++ Fundamentals · OpenCV · NumPy · Scikit-learn · Streamlit

Embedded Systems: Arduino · ESP32 · Ultrasonic Sensors · Sensors & Actuators · Basic Embedded Programming

Tools: Git · GitHub · VS Code · MATLAB/Simulink · AutoCAD Electrical (learning)

PROJECTS

Leaf Health & Disease Detection System

Python · OpenCV · Scikit-learn · Streamlit

- Developed a tomato leaf disease detection application using computer vision and machine learning.
- Implemented image preprocessing and traditional computer-vision feature extraction.
- Classified tomato leaves into Healthy, Early Blight, Late Blight, Leaf Mold, and Septoria Leaf Spot.
- Built an interactive Streamlit interface for image-based prediction.
- GitHub: github.com/shaheen-space/leaf-health-disease-detection

Arduino-Based Distance Measurement System

Arduino · Ultrasonic Sensor

- Developed a distance measurement system using an Arduino and ultrasonic sensor.
- Measured object distance using ultrasonic sound-wave propagation and echo detection.
- Implemented sensor interfacing and embedded programming for real-time distance measurement.

RESEARCH

Quasi-Z-Source Inverter — Final-Year Research Paper

Power Electronics

- Conducted research on Quasi-Z-Source Inverter (qZSI) technology.
- Studied qZSI topology, operating modes, voltage-boost capability, switching operation, and power-electronic applications.
- Focused on advanced inverter topologies for efficient energy conversion.

AREAS OF INTEREST

Power Electronics · Renewable Energy Systems · Embedded Systems · Electrical Automation · EV & Battery Systems · Control Systems · Machine Learning Applications in Engineering

CERTIFICATIONS

To be added — include completed certifications with issuing organization and year.
